

Green Roof Service LLC

FALL 2010

Summer has officially come to a close and Green Roof Service is gearing up for a busy fall at our new location. We are expanding and have added a new member to the team and are in the midst of some exciting new projects.

NEW BEGINNINGS

Early September, Green Roof Service moved to 210 North Hickory Ave. in Bel Air Maryland to make room for new growth. With this move we welcomed Kat Harrold to the team. Kat is a recent graduate from Rutgers Environmental Planning and Design program with a focus in Landscape Architecture. In March, Kat took the Green Roofs for Healthy Cities boot camp and became one of the first 300 individuals to become GRP accredited in May. GRS also welcomed Diane Odell of ADI to the team. Through their collaboration, ADI and GRS, provide a full spectrum of professional design and services for any green roof project. With our new expanded studio and staff we are looking forward to meeting the challenges of our upcoming projects.

PROJECTS

September has been a good month for new prospects. We have been working steadily on a multitude of projects ranging from green roofs and eco-savvy landscape designs for large mixed-use high rises to our newest cruise ship. Some of the projects in progress include...

- Celebrity Cruise Ship the Silhouette
- One Grandview, Pittsburgh, PA
- Hanover Township Administration
- 537 West 20th NYC
- Green Roof Bee Garden, Baltimore, MD
- Green Tracks

SILHOUETTE - The Silhouette is the latest Celebrity Cruise ship to go into production that will be graced with a green roof. Silhouette will be the 4th in a series of highly successful installations and will soon join the Celebrity Solstice, Equinox, and Eclipse which have already received over 300,000 visitors. The maiden voyage is scheduled for Summer of 2011.

ONE GRANDVIEW - Still in the bidding process, One Grandview will be a multi-use luxury high rise that will have a large plaza green roof on the main level and a series of supporting green roofs on the various levels. Additionally, a pond with bio-filtration capabilities will be the center of the ground level landscape design to transform storm runoff to pristine water.

HANOVER TOWNSHIP - For Hanover Township we will be replacing an older green roof and replacing it with a modern green roof with better engineering that will be sure to last.

537 WEST 20TH NYC - The green roof on the Administration and Public works building is joint effort with the highly innovative Selldorf Architects. This project will have a contemporary sloped roof which closely mimics rolling waves.

GREEN ROOF BEE GARDEN - (Not a beer garden) Former ice house transformed into a honey bee oasis.

GREEN TRACKS - This rail road research project with Furbish Company is the first of its kind in the US but only one of many for GRS.
